

表 2 低温预处理(4℃)对原生质体产量的影响

Table 2 Influence of pre-treatment in 4℃ on yield of protoplast

预处理时间(h)	原生质体产量( $\times 10^6$ cells/gFW)
Pre-treating time (h)	Yield of protoplast ( $\times 10^6$ cells/gFW)
0	6.42+0.20 b
12	7.04+0.06 a
18	4.65+0.082 c
24	2.56+0.06 d

注: 数据后不同字母表示在 5%水平上差异显著

Note: Different letters in the same column indicate significant difference at 5% level
